DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to a product, classified in class 428, subclass 188.
 - II. Claims 13-15, drawn to a product, classified in class 428, subclass 182.
 - III. Claims 16-20, drawn to a combination, classified in class 428, subclass 99.
 - IV. Claims 21-23, drawn to a process, classified in class 156, subclass 250.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by a materially different process such as injection molding the plastic, which would not require a cutting step.
3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the

particulars of the subcombination as claimed because the subcombination contains two wall spacers while the combination contains at least two (which could be more than 2). The subcombination has separate utility such as a plastic liner for building materials to sit on in order to be spaced from ground contact.

4. Inventions I and II are separate and distinct inventions that have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to a plastic material with tubular channels (Invention I) while invention II is drawn to a structurally distinct corrugated plastic material.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
